Multi-Factor Authentication (MFA)

advanced authentication method, in addition to the typical username and password. This additional layer of security helps ensure the identity of a user and reduces the risk of unauthorized

Advanced Authentication provides a single access to any device a user owns with minimal authenticators such as a security question, PIN, and an OTP to authenticate on diverse platforms. Authentication comprises these factors:

- Something you know (password, PIN, security questions)
Something you have (smartcard, token,
