Multiple, overlapping sharing capabilities (OneDrive, Teams) lead to user disorientation, duplicate copies of documents and process improvisation. This inefficiency results in lost productivity, data leak risks and non-compliance. Left unchecked, content sprawl can create serious long-term cybersecurity and privacy compliance risks.

While Microsoft 365 offers basic information classification and governance capabilities, these control mechanisms are disconnected from critical business processes and data. For companies operating in highly regulated industries or managing process-intensive tasks, complexity is the enemy. Content must be contextually integrated with business processes across the enterprise.

As a pervasive infrastructure service, Microsoft 3s o
