

PRODUCT OVERVIEW

# OpenText Core Capture for SAP Solutions

Automates information capture in the cloud to improve data quality for better processes and deeper insights

 **Eliminates manual data entry**

 **Uses business context to rapidly extract information**

 **Enables superior recognition rates**

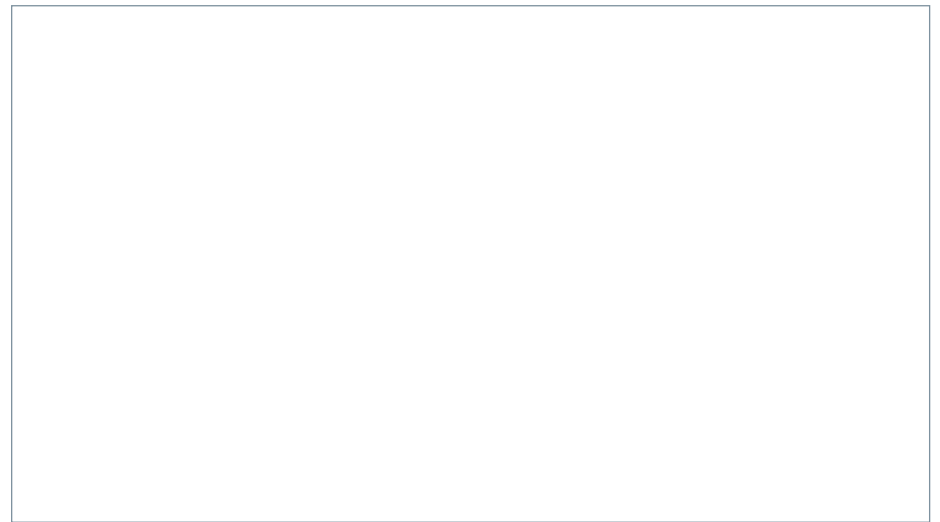

OpenText™ Core Capture for SAP® Solutions fully automates the digitization of incoming SAP-related documents. It employs optical character recognition (OCR) technology combined with machine learning to convert any document to digital, minimizes manual intervention and quickly adapts to changes. As a deeply integrated solution, Core Capture for SAP leverages business context to further improve capture accuracy based on fast learning algorithms and an in-house knowledge base. Easy configuration removes any project or technology barriers to use with any character shapes. However, even the best algorithm will only deliver a certain degree of confidence for individual characters and it is the business context that identifies a word or item with certainty. While character recognition is not

an issue for PDF documents, understanding the context and existence of typos requires intelligent processing algorithms capable of fuzzy and other forms of logical extraction.

## Establishes new content types and fields with ease

Complete and accurate data is a prerequisite for increased automation. Supporting information, such as contract numbers, contact details or device serial numbers, can fully automate matching with master data in SAP, routing exceptions to the right specialist or making intelligent decisions automatically. Ease of configuration revolutionizes otherwise time-consuming manual tasks. Rather than entering data manually, a simple configuration defines the relevant fields and once connected to the cloud, Core Capture for SAP improves with user and system feedback. This goes far beyond standard robotic process automation by directly integrating with OpenText® Vendor Invoice Management for SAP® Solutions. As a result, processing is improved and reports include even more relevant information.

OpenText is one of the few providers that fully owns the complete OCR technology stack. While others rely on third-party OEM agreements and have no direct control over roadmaps, OpenText quickly innovates, improves and optimizes the engine to support customers' needs. Based on more than 30 years of experience, Core Capture for SAP combines world-leading OCR with patent-pending machine learning algorithms. Operated as a multi-tenant cloud service by OpenText, it connects instantly, allowing users to start processing documents immediately and the system to become more intuitive and faster with each document processed. Whether a simple header field or line items in complex tables spanning many pages, Core Capture for SAP successfully and automatically recognizes any incoming document.

## About OpenText

OpenText, The Information Company, enables organizations to gain insight through market leading information management solutions, on-premises or in the cloud. For more information about OpenText (NASDAQ: OTEX, TSX: OTEX) visit: [opentext.com](https://www.opentext.com).
