

PRODUCT OVERVIEW

OpenText™ Core for Supplier Exchange

Streamline secure management of contractual deliverables and transmittals with the cloud

Simplify and expedite the distribution, review and approval of transmittals and contract deliverables

Provide secure access, complete visibility and shared accountability for partners

Securely extend project control to the global supplier network

Monitor

At the end of the cycle, all documents, including new deliverables, are synchronized in the system of record (Extended ECM for Engineering, Core for Capital Projects, Documentum for Capital Projects or Documentum for Asset Operations), with complete version histories, comments, metadata and approvals.

Core for Supplier Exchange may also be integrated with critical business and project and maintenance management systems.

Software as a service: The right solution now

As a software-as-a-service solution, Core for Supplier Exchange leverages the advantages of cloud computing, ensuring broad access for authorized usersga clohe
