

PRODUCT OVERVIEW

Manage the total cost of ownership of your SAP system with

long-term storage

Adding hardware only increases total cost of ownership (TCO). Migrating to SAP HANA® as the underlying database may make performance no longer an issue, but memory usage can also drive the costs for the HANA appliance, and data volume management is still a mandate.

Organizations can keep a grip on their TCO by archiving data with standard

data extracts, reports and print lists. This content allows companies to generate summary reports with data from different transactions and applications. It can also be converted to formats that are viewable independent of the SAP system. The content size can range from megabytes to gigabytes and be archived at intervals, such as weekly, monthly or quarterly. The Archive Center and Imaging Viewer components of Data Archiving for SAP Solutions optimize access, search and retrieval of data extracts, reports and print lists.

Organizations that use OpenText™ Archiving for SAP® Solutions and Document Access for SAP Solutions can also use the same infrastructure for archiving outgoing or incoming documents, office documents and emails and integrate data and documents from legacy systems into the SAP system.

Value scenarios for business and IT
