OpenText Consulting Services and Managed Services

OpenText Learning Services: User Adoption Services

Contact us at opentext.com/about/

OpenText Content Services can bridge content from multiple ERPs, which is key for large enterprises that deploy two ERPs, such as SAP S/4HANA and Dynamics 365 Finance. The tight integration between content and financial processes can streamline workflows and result in:

- Reduced or eliminated costs of paper handling.

- Increased straight-through processing (STP) and reduced exceptions.

- Reduced cost of audits.

- Increased cash operating cycle.

- Reduced vendor payment errors and less strain on key vendors.

- Improved vendor relationships and less chance of litigation.

OpenText Business Workspaces allows users to access all relevant vendor content in one place, all within the familiar Microsoft Dynamics 365 Finance unified interface.
