

PRODUCT OVERVIEW

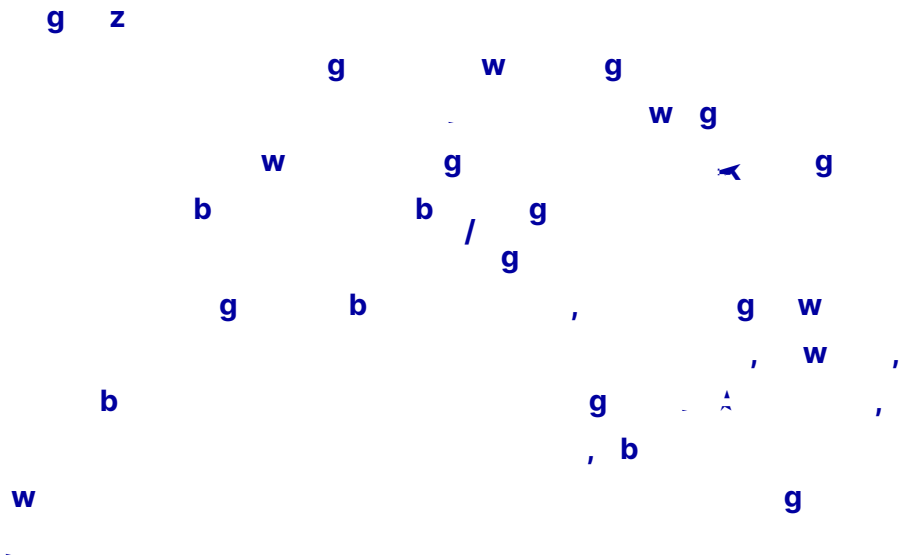

Accelerate cloud transition, optimize infrastructure and ensure compliance with a modern archiving solution

 Archive to the cloud

 Archive databases, applications and documents of legacy systems

 De-commission obsolete systems

 View, search and manage content

OpenText™ InfoArchive is a modern archiving solution and cloud-based service engineered to make compliant archiving of both structured and unstructured information highly-accessible, scalable and economical. With InfoArchive, users

can archive data from legacy systems to the cloud, ensuring data is preserved as data privacy regulations—and eDiscovery requests, without costly changes to legacy applications and systems. Whether focused on active archiving of business-complete information to reduce system loads or application de-commissioning to eliminate outdated systems, InfoArchive is the flexible way to reduce IT costs and accelerate the move to a modernized, cloud-based architecture.

Users can archive any file or data type, including structured data from both

b

Organizations can leverage a cloud-enabled archive in a number of different scenarios to allow the greatest flexibility and cost savings. InfoArchive is future-
