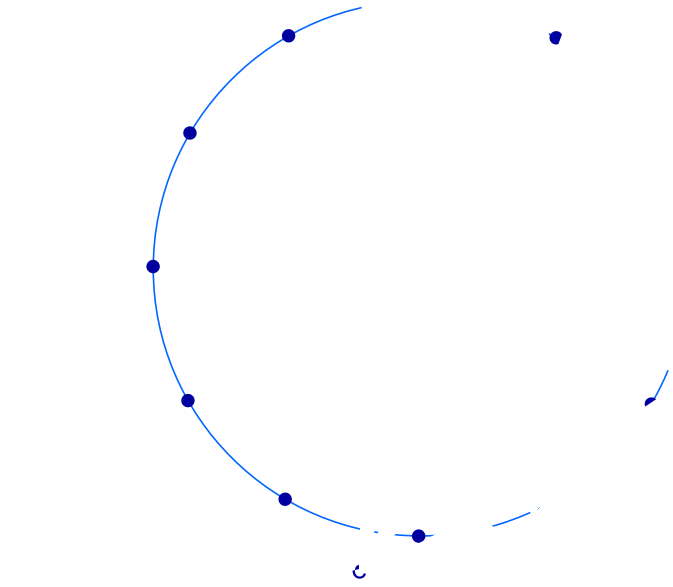
PRODUCT OVERVIEW

Identify and eliminate blind spots in the network

OpenText NDR provides organizations with 360-degree protection, end-to-end visibility and context for direct answers and powerful insight to take immediate action.

The solution provides complete visibility of east-west traffic across network environments in real time and full-spectrum threat detection that extracts and stores high-fidelity metadata, including an indexed threat hunting repository.

A multi-faceted suite of best-in-breed threat detection allows organizations to thoroughly inspect network traffic from every angle. Users can find unknown, hidden threats to conduct retrospective network traffic analysis and historical data testing to determine if threats infiltrated the environment prior to known indicators

OpenText NDR eliminates security blind spots through reatime network visibility. Organizations can see everything on their network via high-fidelity metadata and SmartPCAP, take advantage of full-spectrum threat detection and reduce noise and optimize detection with multiple detection engines examining the network from every angle. Users can thoroughly and proactively investigate detected threats and hunt down unknown threats that did not generate an alert with forensic precision. With seamless response and extensive integrations, organizations can correlate alerts in real time, enrich existing workflows, automate responses and prevent threats. OpenText NDR is the only end-to-end network detection and response platform that allows both security teams and the entire enterprise to collaborate better, reduce security risk and solve network problems faster than ever before.


- Total network visibility of internal and web-bound traffic
- Customizable dashboards for response, analysis, forensic investigation and threat hunting
- Intelligently extracts and stores rich network metadata within a smart scalable repository for efficient threat hunting and incident response
